

Certification

Compatibility, Functionality, Usability, even Performance claims presented by a developer must always be taken with a “grain of salt”; are the values claimed representative of the final product? Can they be trusted? How can any partner or client truly be sure about the validity of performance values released by a developer? The answer is quite simple: Independent 3rd Party certification. In fact, independent certification is the only method to show both partners and clients a product’s true capability, strengths and flaws.

Why an Independent 3rd Party?

nResult, an independent 3rd party test and certification facility, has been a part of the high tech industry for over 17 years having performed QA testing and validation for hundreds of clients over the years in areas as diverse as medical device testing for FDA approval, printer speed testing and multi player game testing. Our goal is and always has to instead deliver comprehensive testing and accurate results based on our actual test findings. Every procedure and result is meticulously documented and reported by nResult in a format hosted and controlled by nResult further ensuring partners and clients that no fabrication or alteration has taken place by the developing parties. With over 17 years of industry experience, nResult has developed some of the most comprehensive and exhaustive testing procedures possible.

How does nResult Certify Products?

From project start to final report, every test procedure is meticulously followed and documented by nResult’s expert engineering team. Before, during and after the testing, procedures and logs are made available to our clients for review. Since nResult is completely independent, we can provide test results that are assuredly unaltered and unedited. By hosting every certification report in nResult’s proprietary reporting portal, partners and clients can view accurate report

details with the confidence only an independent 3rd party can provide. Certification by a body outside your internal organization guarantees that your product was tested on its merits alone; no other factors were pulled into the equation. While collaboration between nResult and the client is essential to most nResult projects, the Certification process dictates complete separation from the client development teams, a separation that nResult ensures is followed.

Why get nResult Certified?

Certification from nResult shows the world that your product meets the highest standards for quality in the industry. By displaying the nResult Certification logo, you can rest assured that nResult will stand behind every finding published and presented on your behalf. Certification reports not only reaffirm the ability of your internal development teams, but also act as superb marketing tools. Upon completion of certification, nResult provides all of the documentation necessary to display your certification to the industry, a certification that you will share with the likes of Intuit™, Blain Warren, and other industry leaders.

Get Certified Today

Certification through nResult allows developers, partners, clients, and the entire tech industry to see your commitment to quality. Contact nResult to learn how your product can earn the nResult Certification.
